

Not afraid of a little speed are you?

Fortune 500 Companies say
"There's no faster way to
Audit Windows Servers"

StealthAUDIT

Active Directory

Query Practically anything from Active Directory

Registry

Audit any registry value from any Windows machine including last modification date and time

File System

Check the version, size, presence, dates, etc of any file or folder. Get the total size of a group of files or folders

Eventlog

Audit the event logs for critical alerts and warnings. Retrieve virtually any events and their details

Services

Get a list of installed services and their status including logon id and startup settings

Disks

Enumerate disks and check for size and free space

Users and Groups

Find out who has rights on your servers, detect membership change in any group

Patch Management

Find out which machines are vulnerable to threats

Performance Monitor

Check server health by accessing any performance counter

Looming security threats, continuous hotfix deployments, migrations projects, software rollouts and of-course day to day systems management are part of a hectic IT world. The pace is increasing. Everyone expects more for less. IT Shops are being asked to deliver higher quality of service at reduced cost.

Just in Time Operations Data

The manufacturing world has already found that "just in time" methods enable nimble, reduced cost operations. The same holds true for the IT world. However this has been very costly in the past and for some shops near impossible.

Now, with StealthAUDIT you can get answers to questions faster than ever before and all without a line of script. Armed with StealthAUDIT, an administrator that has just become aware of a situation can query over 1000 servers in about 30 minutes. Most large companies report query times as fast as 1 second per host.

Print Your Own Money

As with most things in the world, time is money. StealthAUDIT creates time. With StealthAUDIT you now own the time that you used to spend searching for information, writing and testing scripts, formatting and posting information for others, requesting information and waiting on other groups, etc. Not to mention that you often need this information in a crisis. Add it up and you'll find that StealthAUDIT will pay for itself in under one year.

They'll Thank You

There's nothing more frustrating that fighting political and organizational boundaries trying to get information that is needed to ensure a quality service. With StealthAUDIT, you can setup your jobs to automatically post web reports including charts to your departmental servers. You can also have StealthAUDIT automatically email reports and notifications to whom-ever needs them. Making the information available, your group will shine.
